Education

Cornell University — College of Arts and Sciences
B.A. in Computer Science and Mathematics (GPA 3.7)

Ithaca, NY
Expected May 2028

- **Relevant Coursework:** Data Structures & Algorithms, Databases, Computer Systems, Machine Learning, Large-Scale Machine Learning, Backend Development, Quantitative Finance, Statistics, Linear Algebra, Real Analysis

Technical Experience

CompactLegal — *Backed by Cornell's Beck Fellowship*
Co-founder & Developer

March 2026 – August 2026

- Co-founded and shipped a legal workflow platform piloted by 3 law firms and used by 20+ lawyers, automating drafting, research, and document review.
- Built citation-backed retrieval-augmented generation (RAG) and multi-agent workflows that synthesized fragmented case records into reviewable work products, with verification and human approval gates.
- Integrated 10 providers including Gmail, Outlook, Clio, and Google Drive using OAuth and webhooks to trigger workflows from emails, calendar events, and case activity.
- Built a long-context LLM evaluation pipeline on 4,000+ legal QA examples to measure retrieval degradation, distractor sensitivity, hallucination, abstention, latency, and cost across frontier models.

Simulacrum

January 2026 – May 2026

Software Engineering Intern, Data Infrastructure

- Built an automated TypeScript ingestion service on GCP that replaced manual time-series updates and loaded 10M+ observations per month across hundreds of external data series into PostgreSQL.
- Made new data sources faster to onboard by replacing separate ingestion jobs with one configurable framework for scheduling, retries, and historical backfills.

Cornell University

January 2026 – Present

Teaching Assistant, CS 1110: Introduction to Computing

- Supported 500+ students in Python fundamentals, debugging, and testing through weekly lab sections and office hours.

Elmore

June 2025 – August 2025

Quantitative Analyst Intern

- Built two ML models to trade FX, a TensorFlow/Keras neural network and a Lorentzian-distance kNN classifier, on ~10 years of intraday EUR/USD data using engineered technical-indicator features.
- Developed a vectorized NumPy backtesting engine with transaction-cost modeling, out-of-sample validation, and risk metrics (Sharpe, drawdown, MAE/MFE) across 8,000+ trades.

Projects

ASAM | *Hack@Brown Venture Track 2026 Finalist*

- Built a React Native event platform with a Supabase/PostgreSQL backend that ranked attendees by mutual connections and awarded profile badges from post-event activity; placed top four and won Strongest Product Thinking at Hack@Brown.

DormHop | *Best Overall App, Cornell AppDev Hack Challenge*

- Led a Kotlin / Jetpack Compose dorm-discovery and room-swap app with search, saved rooms, roommate matching, and amenity filters, iterating on features based on feedback from 30+ Cornell students.

RedRetriever | *Cornell AppDev Hack Challenge*

- Built 10+ REST APIs on a Flask / Cloud SQL backend for a campus lost-and-found app, integrating TF-IDF retrieval with GPT-4o image captioning to match text queries against photos of found items.

Honors and Awards

- **Indonesian National Olympiad of Informatics** — Top 0.2% (54/30,000+) in C++ competitive programming.
- **BIM 3 (Beasiswa Indonesia Maju) Scholarship** — Full-ride national scholarship for outstanding students.
- **UKMT Senior Mathematical Challenge** — Gold Award; qualified for BMO (top 1.5%).

Technical Skills

Programming Languages: Python, C++, Java, Kotlin, TypeScript, JavaScript, SQL, OCaml

Frameworks: React, Next.js, Flask, SQLAlchemy, Jetpack Compose, Retrofit, Hilt

Infrastructure & Database: Google Cloud Platform, PostgreSQL, Supabase, Inngest, Docker

ML & Data: pandas, NumPy, scikit-learn, TensorFlow, Keras
